## CAREER OBJECTIVE

To take up a challenging position in an esteemed organization that provides me an opportunity to prove individuality and talent. Possess diversified technical background with Enterprise System Solution. Proven ability to implement technologies that decrease costs, increase performance and positively affect the bottom line.

## PROFESSIONAL SUMMARY

- Having **3+** of years of Experience as **L1** and **L2** level of **Production Support** and **Application Support** in Banking and finance domain.
- Monitor production systems and applications to ensure high availability and performance.
- Perform basic troubleshooting and resolve tickets within defined SLA.
- Perform routine health checks for applications, servers, and batch jobs.
- Monitor jobs via Control-M and handle job failures.
- Execute SQL queries for data validation and issue investigation.
- Restart services and perform basic server checks in UNIX/Linux environments.
- Coordinate with L2/L3 teams for unresolved issues.
- Provide timely updates to stakeholders and users.
- Prepare daily/weekly incident and system health reports.
- Follow ITIL processes for Incident, Problem, and Change Management.
- Perform in-depth analysis and troubleshooting of production incidents.
- Debug application issues using logs, SQL queries, and server-level analysis.
- Prepare daily/weekly incident and system health reports.
- Work closely with development teams for code-level fixes.
- Perform data correction scripts and database performance tuning.
- Manage deployments and support release activities.
- Perform Unix/Linux server log analysis and performance checks.
- Prepare RCA documents and present incident analysis reports.
- Support change management and production deployments.
- Automate repetitive tasks using shell scripting.
- Technically efficient in UNIX / LINUX, Oracle (SQL).
- Excellent working knowledge in UNIX Commands like GREP, SED, Vi Editor, Find, ls, PS and others.
- Good knowledge on SQL Concepts like DDL, DML, Clauses, Joins, Sub query and others.
- Good knowledge on **Core Java**

- Knowledge of **Agile** methodologies with experience in ITIL-based production support processes.
- Basic knowledge on AWS services like Amazon EC2, Amazon S3, Amazon VPC, and Amazon CloudWatch.

## SUMMARY OF WORK EXPERIENCE

- Presently working as an **Application / Production support engineer** at **Wipro Technologies Private Limited, Bangalore** from **April 2023 to till date**.

### Description :

FCES (Foreign Currency Exchange System) which offers the complete cycle of processes in centralized operations of import and export transactions. Mainly the system deals the Foreign Currency exchange between importer and exporter banks. The objective of the system is to improve the trading activities among the countries by reduce the processing time as well as minimize the risk. The system is giving essential information, which can help in decision-making process and improve the customer service. The system is well suitable for the distributed working environment. Mainly the modules are involved in this project, such as Import-Export Transactions, Remittance, forward and Inland Transactions.

## **Roles & Responsibilities**

- Monitored FCES production environment to ensure high availability of foreign exchange transactions.
- Day to day resolution on UNIX based issues through ticketing system in compliance to SLA cycles.
- Acted as the first point of contact for production incidents and user-reported issues.
- Logged, categorized, and prioritized incidents based on severity (P1/P2/P3) as per SLA.
- Monitored batch jobs using scheduling tools and handled job failures.
- Executed SQL queries for data validation, transaction verification, and issue analysis.
- Performed routine health checks on application servers and database connectivity.
- Restarted failed services and performed basic UNIX/Linux troubleshooting.
- Escalated complex issues to L2/L3 teams with proper analysis and logs.
- Provided timely updates to stakeholders and participated in incident bridge calls.
- Prepared daily incident reports and system availability reports.
- Followed ITIL processes for Incident and Change Management.
- Monitored application and batch servers using UNIX commands.
- Checked server health using top, df -h, du -sh, free -m, vmstat.
- Monitored CPU, memory, and disk utilization.
- Analyzed application logs using grep, awk, sed, tail -f.
- Identified transaction failures from log files.
- Performed root cause analysis using server and application logs.
- Monitored scheduled jobs and batch processes

## **DECLARATION**

I here by declare that the information furnished above is true and correct to the best of my knowledge and belief.
